

Painting and Coatings

HMT Painting and Coatings division provides all types of surface coating solutions for aboveground storage tanks as well as industrial and marine applications such as piping and vessels.

A wide variety of internal and external applications are offered, including standard or special surface preparation, application methods and techniques, and multi-coat systems – all designed to meet your specific needs.

Anticipated service, site, temperature, environmental and operating conditions vary considerably, so it is necessary that industrial painting and coating services accommodate these variable conditions.

HMT's experienced personnel work closely with our customers and with coating manufacturers to determine the most appropriate coating system for the proposed application. Whether one is considering an epoxy, zinc rich epoxy, polyurethane, water acrylic, inorganic zinc, polyamide, phenolic, coal tar mastic, silicone, alkyd, enamel, vinyl-ester, latex, FRP or other type coating system, HMT can provide the expertise needed for a long lasting protective coating.

Contact your local HMT representative to discuss the full suite of products and services that will satisfy all your AST needs.

HMT's Painting & Coating Services Include:

- Scope of Work Development
- Existing Surfaces Evaluation
- Environmental Exposure Analysis
- Proper Surface Preparation
- Coating Selection
- Selection of Optimum Application Method
- Definition of Site Conditions
- Product & Application Assurance

HMT's Diversified Coating Applications Include:

- Aboveground Storage Tanks
- Pressure Vessels
- Piping
- Structural
- Offshore and Marine Structures
- Other Metal and Non-Metal Structures
- 100% Solids Coating Material
- Low Temp Applications
- Automated Portable Shot Blast Cleaning
